

ATTACK SURFACE MANAGEMENT

See what attackers see — before they do.

Isaphia ASM is a continuous attack-surface platform that discovers, monitors, and prioritizes every internet-facing asset your organization owns — including the ones you forgot. Outside-in, no agents, no cloud credentials required. Built for mid-market security teams, MSSPs, and consultants.

PLATFORM CAPABILITIES

Asset Discovery Apex, subdomains, IPs, ASN, WHOIS lifecycle.	Vulnerability Scanning CVE + EPSS + KEV + tech-stack EOL.	Cloud Exposure S3 / Azure Blob / GCS probed outside-in.	Port & Service Scan Open-port inventory with banner grabbing.
SSL/TLS Monitoring Cert expiry, weak ciphers, hostname mismatch.	Dark-Web & Breaches Multi-source breach corpus + paste-site monitor.	Secret Detection Secrets scan across HTML/JS/ configs/sourcemaps.	Brand Protection Mobile apps + social media impersonation.
Email Security SPF, DMARC, DKIM, MTA-STX, BIMI, DNSBL.	Email & Contact Discovery OSINT + cert SAN + page-fetch.	Typosquat & Lookalikes Scorer + parking-page suppression.	Sensitive-Data Exposure Canadian PII + TBS + tenant-custom patterns.
Screenshot Capture Visual verification of every host.	Web Crawler & JS Analyzer Deep-page discovery + sourcemap inspection.	Notifications & Routing Per-severity webhook routing, multi-channel.	PCI DSS 11.3.2 Workflow Scheduled external scans + attestation evidence.

INTEGRATIONS & ENTERPRISE READINESS

Integrations & Workflow <ul style="list-style-type: none"> SIEM — Splunk HEC, Elastic, CEF (Chronicle/ArcSight) Ticketing — Jira, ServiceNow, Zendesk Notifications — Email, Slack, Teams, webhooks SSO/OIDC — Google, Azure AD, Okta + WebAuthn + TOTP REST API + per-org blocklist / EDL export Append-only audit log with admin-readable API 	Enterprise Readiness <ul style="list-style-type: none"> Multi-tenant w/ hard per-org isolation at the query layer Canadian data residency (Toronto); EU / US on request VPC-private managed database, AES-256 at rest, TLS 1.3 in transit Non-root service posture, mode-600 secrets, dedicated unprivileged user Managed cloud database 99.95% SLA + 99.99% compute network SLA TLP v2.0 enforced across all exports
